OBJECTIVE

A fifth-semester Informatics student with a strong interest in frontend development, backed by a UI/UX design foundation and practical experience with React, Next.js, and Tailwind CSS. Currently deepening my knowledge in backend development to strengthen my full-stack capabilities. I am eager to apply my technical and design skills while continuing to grow in a professional, collaborative environment.

EDUCATION

Universitas Pembangunan Nasional "Veteran" Jakarta

Jakarta, Indonesia

Bachelor's Degree of Computer Science, Informatics

2024 – Present

Cumulative GPA : 3.94 / 4.0

Relevant Coursework : Software Engineering, Object-Oriented Programming, Data Structures, Database Systems, Platform-Based Programming.

EXPERIENCES

HIMA Informatika | *Vice Head of Media Communication and Information*

January 2026 – Present

- Led a team of 7 staff across two divisions (Public Relations and Multimedia), and initiated a transparent Google Sheets-based system to manage 400+ design and information distribution request within one semester.
- Designed the system to promote fairness and accountability by giving staff visibility into each other's ongoing task, reducing the perception of unequal workload distribution.
- Coordinated and designed the organization's Company Profile, showcasing 43 organization members.

KSM Android | *Member*

November 2024 – December 2025

- Completed 3 structured study class about UI/UX and Frontend, each held weekly over one semester, with a total of 15 hours in 10 sessions, covering design methodology, Figma prototyping, and front-end fundamentals.
- Produced 2 individual projects and 1 team based project, applying skills such as wireframing, prototyping, and responsive layouts.
- Explored how to design and develop digital products that effectively communicate their purpose to users.

PROJECTS

Lunaria E-Commerce (Team Project) | [Project Link](#)

October 2025

- Built a full-stack e-commerce web app in a monorepo architecture (Next.js frontend, Express.js backend) with 5 core pages (shop, cart, profile, login, register) and a 33-item product catalog, styled entirely with Tailwind CSS for responsive UI.
- Implemented 13 RESTful API endpoints covering authentication, cart, orders, and profile management, handling dynamic data flow between frontend and backend, deployed on Vercel for production.

TrashTrack (Team Project) | [Project Link](#)

June 2026

- Developed the IoT sensing layer using ESP32 with ultrasonic and gas sensors, publishing real-time JSON data over MQTT every 2 seconds to feed a smart-city waste management platform built by a 5-person team.
- Implemented a 3-tier status classification system based on fill-level and gas thresholds, along with auto-calibration and MQTT reconnect logic, ensuring reliable sensor-to-cloud data delivery through a Node-RED bridge into the platform's 10-service microservice architecture.

Merchio E-Commerce App (Team Project) | [Project Link](#)

May 2026

- Built the Home page (auto-slide banner, horizontal category list, and 2-column product grid) and a multi-step Checkout flow with dynamic cost calculation, for a Java-based Android marketplace app.
- Designed and hosted 3 REST API endpoints (products, categories, banners) consumed via Retrofit and Gson, powering real-time product data across the app.

HONORS & CERTIFICATES

Frontend Basic Study Club | KSM Android

December 2025

- Completed a frontend fundamentals program covering HTML semantic elements, CSS box model and selectors, Flexbox/Grid layouts, JavaScript DOM manipulation, responsive design with Bootstrap, and Git/GitHub workflows.

UI/UX Beginner Study Club | KSM Android

June 2025

- Completed an advanced UI/UX program covering Figma components/variants, auto layout, design systems, high-fidelity prototyping, usability testing, and developer collaboration workflows.

UI/UX Basic Study Club | KSM Android

December 2024

- Completed an UI/UX fundamentals program covering the design thinking process (empathize to ideate), Figma basics, Laws of UX, and low-to-mid fidelity wireframing.

SKILLS

Programming Languages : HTML, CSS, JavaScript, Java, C, C++

Framework & Libraries : React.js, Next.js, Express.js, Tailwind CSS, Retrofit

Database : MySQL, MongoDB, SQLite

Developer Tools : Figma, Git, GitHub, Node.js, Vercel, Android Studio

Soft Skills : Leadership, Adaptability, Problem Solving, Communication, Attention to Detail, Creativity, Time Management

Languages : Indonesian (Native), English
